

December cash flows: Lucky number 13?

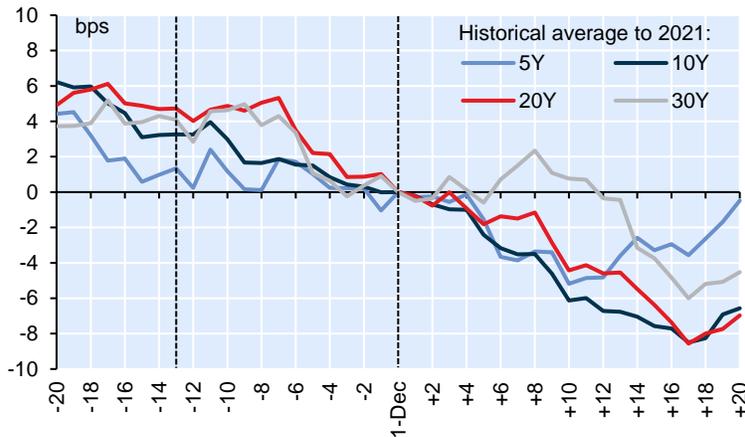

By Warren Lovely & Taylor Schleich

As of today, November 14th, the leading edge of Canada's ultra-chunky December cash flows are precisely 13 weekdays away. As it relates to Canada's sizable seasonal cash flows, the purpose of this *Market View Addendum* is five-fold:

- Remind readers of this major technical quirk** – Given the magnitude of the cash in question and the tendency to influence pricing, we offered an in depth look via [Market View \(No. 84\)](#). A related [Addendum](#) provided bond index simulations for the key days in question.
- Re-calibrate select relationships for where we are vs. first cash** – The first cash arrives in 13 weekdays. To gauge the available opportunity, we showcase empirical success rates from T-13 (i.e., now) to T=0 (i.e., first of December). Specifically, we test the *a priori* assumption that outsized cash and related duration extension leads to Canada outperformance vs. the U.S. and a flatter yield curve, all else equal.
- Provide greater historical perspective** – Much of our earlier analysis was based on a post-GFC sample/range covering 2010 to 2021. To better assess statistical consistency we have extended our look-back period to as much as 30 years (i.e., way back to 1992).
- Caution on current location specifically** – Historically speaking, cash flow-induced performance of Canadas and related curve dynamics *do not* appear to be significantly influenced by starting levels (i.e., the underlying richness/cheapness of Canada-U.S. or flatness/steepness of the Canada curve going into December's cash). Saying that, we're clearly at extreme levels these days, being both tight and flat/inverted. Moreover, the ability of Canada to outperform the U.S. *does* tend to be seriously influenced by overall market directionality. That's clearly something to bear in mind as FOMC expectations are prone to re-pricing here. Which leads to the final point...
- Caution on seasonal tendencies in general** – We would always treat seasonal/technical analysis with a grain of salt. Historical averages and success rates are all well and good; play the averages if you so desire. But performance is not assured (and you won't really find 100% past success). We've seen cases where a technical impulse is overwhelmed by fundamental-driven re-pricing. With volatility elevated and market liquidity less-than-ideal, these cautions are worth repeating.
